Offers

SOLAR PUMP SYSTEMS

Features:

1. More water with fewer watts.
2. Full system sole source responsibility.
3. Two year from "Date of Installation" warranty.
4. Modular design, replace what fails, not the entire unit.
5. Wide pump and motor selection range to meet peak efficiency.
6. 3 models of solar panels stocked. If a panel needs to be replaced, will the place you are buying it be able to get the same model? We can!
7. Solar panels are mono-crystalline and are efficient in size. For example, the 90 watt Lorentz panel measures 40.9 inches by 21.7 inches which is a total of 6.167 square feet. The Kaneka 60 watt panel measures 37.8 inches by 38.98 inches for a total of 10.235 square feet. This is 39.7% more space taken up by the Kaneka, and it is 30 watts less!
8. Our EZ Racks can be assembled in less than 20 minutes on a 4 panel system. No drilling holes or looking for bolts. They are also able to withstand an 80mph wind with a 1" thick sheet of ice on the panels.
9. Variable speed control on every unit, standard.
10. Dry well probe sensor is separate, not in the leads of the motor, so you don't have to pull the pump to see if the float switch is working!
11. Two control inputs on each controller, standard.
12. Complete comprehensive manual is provided to help with troubleshooting.
13. Maximum RPM-3300.
14. 4" Motor is 92% efficient.
